

单胺氧化酶 B 说明书

中文名称：单胺氧化酶 B

英文名称：MAO-B； Monoamine Oxidase B

级别：Recombinant

来源：human ； expressed in baculovirus infected BTI insect cells

比活力： ≥ 1 units/mg protein

活力定义：One unit will deaminate 1 nanomole of Kynuramine per minute at pH 7.4 at 37 deg C

应用: Drugs that inhibit monoamine oxidase B activity are used for the treatment of various neurological disorders including depression. [1]

Monoamine Oxidase B has been used in a study to assess the effect of age in 23 different regions of the human brain. [3] It has also been used in a study to determine the specific locations of monoamine oxidase in the human brain

性状(以下信息仅供参考): 粉末或液体。

用途: 本品仅供科研，不得用于其它用途。

保存: -70℃
