**产品介绍 background:**

The protein encoded by this gene is a member of the keratin gene family. This type I hair keratin is an acidic protein which heterodimerizes with type II keratins to form hair and nails. The type I hair keratins are clustered in a region of chromosome 17q12-q21 and have the same direction of transcription. [provided by RefSeq, Jul 2008]

**Tissue Specificity:**

Early expression in the hair follicle, mainly found in supramatrical cells and lowermost cortical cells of the hair bulb.

**Similarity:**

Belongs to the intermediate filament family.
